## 32-18294: Human CFD Protein, hFc Tag

**Uniprot ID:** P00746

Alternative Name: ADIPSIN;ADN;DF;PFD

## **Description**

**Description:** Recombinant Human CFD Protein with C-terminal human Fc tag

Background: This gene encodes a member of the S1, or chymotrypsin, family of serine peptidases. This protease catalyzes the cleavage of factor B, the rate-limiting step of the alternative pathway of complement activation. This protein also functions as an adipokine, a cell signaling protein secreted by adipocytes, which regulates insulin secretion in mice. Mutations in this gene underlie complement factor D deficiency, which is associated with recurrent bacterial meningitis infections in human patients. Alternative splicing of this gene results in multiple transcript variants. At least one of these variants encodes a preproprotein that is proteolytically processed to generate the mature protease.

Molecular Characterization: mass of 50.5 kDa after removal of the signal peptide. The apparent molecular mass of CFDhFc is approximately 55-70 kDa due to glycosylation.

Tag: C-Human Fc Tag

## **Product Info**

Amount: 50 μg / 100 μg

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue **Purification:** 

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before Content:

lyophilization.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended Storage condition:

for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient temperature.
