32-18302: Human CD79A Protein, hFc Tag

Uniprot ID: P11912
Alternative Name: IGA:MB-1

Description

Description: Recombinant Human CD79A Protein with C-terminal human Fc tag

Background: The B lymphocyte antigen receptor is a multimeric complex that includes the antigen-specific component, surface immunoglobulin (Ig). Surface Ig non-covalently associates with two other proteins, Ig-alpha and Ig-beta, which are necessary for expression and function of the B-cell antigen receptor. This gene encodes the Ig-alpha protein of the B-cell antigen component. Alternatively spliced transcript variants encoding different isoforms have been described.

Molecular Characterization: mass of 38.7 kDa after removal of the signal peptide. The apparent molecular mass of CD79A-hFc is approximately 35-70 kDa due to glycosylation.

Tag: C-Human Fc Tag

Product Info

Amount: 50 μg / 100 μg

Purification:

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

staining.

Content: Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before

lyophilization.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended

Storage condition: for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient temperature.
