

32-18451: Human FCRL5(745-850)Protein, hFc Tag

Uniprot ID : Q96RD9

Alternative Name : CD307; FCRH5; IRTA2; BXMAS1; CD307e; PRO820

Description

Description :Recombinant human FCRL5(745-850)Protein with N-terminal human Fc tag

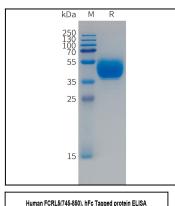

Background : This gene encodes a member of the immunoglobulin receptor superfamily and the Fc-receptor like family. This gene and several other Fc receptor-like gene members are clustered on the long arm of chromosome 1. The encoded protein is a single-pass type I membrane protein and contains 8 immunoglobulin-like C2-type domains. This gene is implicated in B cell development and lymphomagenesis. Alternatively spliced transcript variants encoding different isoforms have been identified.

Molecular Characterization: mass of 37.2 kDa after removal of the signal peptide. The apparent molecular mass of hFc-FCRL5(745-850)is approximately 35-55 kDa due to glycosylation.

Tag :N-Human Fc tag

Product Info

Amount :	50 μg / 100 μg
Purification :	The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining.
Content :	Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization.
Storage condition :	Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.

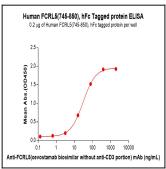

Figure 1. Human FCRL5(745-850) Protein, hFc Tag on SDS-PAGE under reducing condition.

Figure 2. ELISA plate pre-coated by 2 $\hat{1}_{4}$ g/mL (100 $\hat{1}_{4}$ L/well) Human FCRL5(745-850) Protein, hFc Tag can bind Anti-FCRL5(cevostamab biosimilar without anti-CD3 portion) mAb in a linear range of 3.20-400 ng/mL.
