

## 32-18483: Cynomolgus TIGIT Protein, hFc Tag

**Uniprot ID :** A0A7N9I9V4  
**Alternative Name :** VSIG9; VSTM3; WUCAM

### Description

**Description :** Recombinant Cynomolgus TIGIT protein with C-terminal human Fc tag

**Background :** This gene encodes a member of the PVR (poliovirus receptor) family of immunoglobulin proteins. The product of this gene is expressed on several classes of T cells including follicular B helper T cells (TFH). The protein has been shown to bind PVR with high affinity; this binding is thought to assist interactions between TFH and dendritic cells to regulate T cell dependent B cell responses.

**Molecular Characterization:** mass of 46.6 kDa after removal of the signal peptide. The apparent molecular mass of cTIGIT-hFc is approximately 35-55 kDa due to glycosylation.

**Tag :** C-Human Fc tag

### Product Info

**Amount :** 50 µg / 100 µg

**Purification :** The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining.

**Content :** Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization.

**Storage condition :** Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
