

## 30-1453AF-488: Anti-CD163 Monoclonal Antibody (Clone:GHI/61) Alexa Fluor 488

<b>Clonality :</b>	Monoclonal
<b>Clone Name :</b>	GHI/61
<b>Application :</b>	IHC,FACS,WB
<b>Reactivity :</b>	Human
<b>Gene :</b>	CD163
<b>Gene ID :</b>	9332
<b>Uniprot ID :</b>	Q86VB7
<b>Alternative Name :</b>	CD163,M130
<b>Isotype :</b>	Mouse IgG1
<b>Immunogen Information :</b>	Hairy cell leukemia cells

### Description

CD163, also known as M130, is a member of the scavenger receptor family, accounting for the clearance of hemoglobin-haptoglobin complexes during limited hemolysis, which protects the body, in particular the kidneys, against heme-mediated oxidative damages. It does not have measurable affinity for noncomplexed hemoglobin or haptoglobin. Immunomodulatory role of CD163 has been postulated. CD163 is expressed by cells of the monocyte-macrophage lineage and its extracellular part also circulates in plasma as a soluble protein, especially during sepsis and other conditions affecting macrophage activity, when its level may raise manyfold.

### Product Info

<b>Amount :</b>	100 tests
<b>Purification :</b>	Purified by protein-A affinity chromatography
<b>Content :</b>	Stabilizing phosphate buffered saline (PBS), pH 7.4, 15 mM sodium azide
<b>Storage condition :</b>	Store at 2-8°C. Do not freeze.

### Application Note

Flow cytometry: The reagent is designed for analysis of human blood cells using 4 µl reagent / 100 µl of whole blood or 10<sup>6</sup> cells in a suspension. The content of a vial (0.4 ml) is sufficient for 100 tests.

Figure 1: Flow cytometry surface staining pattern of human peripheral whole blood stained using anti-human CD163 (GHI/61) Alexa Fluor® 488 antibody (4 µl reagent / 100 µl of peripheral whole blood).

Figure 2: Separation of human monocytes (red-filled) from lymphocytes (black-dashed) in flow cytometry analysis (surface staining) of human peripheral whole blood stained using anti-human CD163 (GHI/61) Alexa Fluor® 488 antibody (4 µl reagent / 100 µl of peripheral whole blood).
