## 32-18622: Human CA9(38-137) Protein, hFc Tag

**Gene:** CA9 **Uniprot ID:** Q16790

Alternative Name: MN; CAIX, Recombinant human CA9(38-137) Protein with C-terminal human Fc tag

## **Description**

Carbonic anhydrases (CAs) are a large family of zinc metalloenzymes that catalyze the reversible hydration of carbon dioxide. They participate in a variety of biological processes, including respiration, calcification, acid-base balance, bone resorption, and the formation of aqueous humor, cerebrospinal fluid, saliva, and gastric acid. They show extensive diversity in tissue distribution and in their subcellular localization. CA IX is a transmembrane protein and is one of only two tumorassociated carbonic anhydrase isoenzymes known. It is expressed in all clear-cell renal cell carcinoma, but is not detected in normal kidney or most other normal tissues. It may be involved in cell proliferation and transformation. This gene was mapped to 17q21.2 by fluorescence in situ hybridization, however, radiation hybrid mapping localized it to 9p13-p12. [provided by RefSeq, Jun 2014]

Molecular Weight: The protein has a predicted molecular mass of 37.0 kDa after removal of the signal peptide. The apparent molecular mass of CA9(38-137)-hFc is approximately 35-55 kDa due to glycosylation.

Tag: C-Human Fc tag

## **Product Info**

**Amount:** 50μg / 10μg

**Purification :** The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

staining.

Content: Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before

lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended

**Storage condition :** for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient temperature.
