

32-18623: Human NK1R Protein, hFc Tag

Gene : NK1R
Uniprot ID : P25103
Alternative Name : SPR; TACR1; NKIR; TAC1R, Recombinant human NK1R Protein with C-terminal human Fc tag

Description

This gene belongs to a gene family of tachykinin receptors. These tachykinin receptors are characterized by interactions with G proteins and contain seven hydrophobic transmembrane regions. This gene encodes the receptor for the tachykinin substance P, also referred to as neurokinin 1. The encoded protein is also involved in the mediation of phosphatidylinositol metabolism of substance P. [provided by RefSeq, Sep 2008]

Molecular Weight : The protein has a predicted molecular mass of 29.6 kDa after removal of the signal peptide.

Tag : C-Human Fc tag

Product Info

Amount : 50µg / 10µg
Purification : The purity of the protein is greater than 90% as determined by SDS-PAGE and Coomassie blue staining.
Content : Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.
Storage condition : Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
