

12-8246: Anti-Rift Valley Fever Virus, Glycoprotein (Gn) (Clone RVFV-142)-Purified No Carrier Protein

Clonality : Monoclonal
Clone Name : RVFV-142
Application : ELISA
Isotype : Human IgG1

Description

Specificity: Clone RVFV-142 binds a amino acid residues 164-186 and 270-294 of the Gn glycoprotein of Rift Valley Fever Virus (RVFV).

Antigen Distribution: RVFV is primarily found in hepatic cells, endothelial cells, and mononuclear phagocytes in the human body. This distribution reflects the virus's tendency to cause hepatitis, hemorrhagic fever, and encephalitis during infection.

Background: RVFV is a mosquito-borne phlebovirus primarily found in sub-Saharan Africa, especially in eastern and southern Africa. It infects both humans and ungulates (such as cows, goats, and sheep). RVFV causes a wide range of health effects, from mild illness to severe conditions like hemorrhagic disease, encephalitis, hepatitis, kidney injury, and retinitis. The virus can lead to spontaneous abortions in animals. RVFV outbreaks often occur during years of unusually heavy rainfall and flooding, as mosquitoes hatch more eggs, increasing transmission potential^{1,2}. RVFV-128 is a monoclonal antibody that was isolated from a donor who was given the RVFV MP-12 vaccine. Mutagenesis screening revealed that amino acid residues 164-186 and 270-294 of the Gn glycoprotein are critical for antibody binding.

Product Info

Amount : 250µg / 1 mg
Purity: $\geq 90\%$ monomer by analytical SEC and SDS-Page

Purification : Preparation: Recombinant antibodies are manufactured in an animal free facility using only in vitro protein free cell culture techniques and are purified by a multi-step process including the use of protein A or G to assure extremely low levels of endotoxins, leachable protein A or aggregates.
Concentration: ≥ 1.0 mg/ml

Content : Formulation: This recombinant monoclonal antibody is aseptically packaged and formulated in 0.01 M phosphate buffered saline (150 mM NaCl) PBS pH 7.2 - 7.4 with no carrier protein, potassium, calcium or preservatives added. Due to inherent biochemical properties of antibodies, certain products may be prone to precipitation over time. Precipitation may be removed by aseptic centrifugation and/or filtration.

Storage condition : This antibody may be stored sterile as received at 2-8°C for up to one month. For longer term storage, aseptically aliquot in working volumes without diluting and store at $\leq -70^\circ\text{C}$. Avoid Repeated Freeze Thaw Cycles.

Application Note

ELISA, N
