

## 32-1149: EPGN His Recombinant Protein

**Alternative Name :** EPG,Epigen,PRO9904,ALGV3072,FLJ75542,EPGN,Epithelial mitogen.

### Description

Source : Escherichia Coli. EPGN Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 111 amino acids (23-110 a.a) and having a molecular mass of 12.1kDa.EPGN is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. EPGN is an EGF-related polypeptide growth factor that signals through the ErbB receptor-1. EPGN is produced in numerous tissues, including the testis, liver, heart and in certain tumor cells. EPGN is mitogenic for fibroblasts and epithelial cells. Human EPGN is originally synthesized as a glycosylated 14.7 kDa transmembrane precursor protein, which is processed by proteolytic cleavage to produce a mature soluble sequence.
