32-1215: mHB-EGF Recombinant Protein

Alternative Name

Heparin-binding EGF-like growth factor,DTR,HEGFL,diphtheria toxin receptor (heparin-binding epidermal growth factor-like growth factor),DTSF,proheparin-binding epidermal growth factor-like growth factor.

Description

Source: Escherichia Coli. HB-EGF Mouse Recombinant produced in E.Coli is a single, non-glycosylated, polypeptide chain containing 86 amino acids (63-148 a.a.) and having a molecular mass of 9.8 kDa.The HB-EGF is purified by proprietary chromatographic techniques HB-EGF is an EGF related growth factor which signals via the EGF receptor, and stimulates the proliferation of SMC (smooth muscle cells), fibroblasts, epithelial cells and keratinocytes. HB-EGF is expressed in various cell types and tissues, including vascular endothelial cells and SMC, macrophages, skeletal muscle, keratinocytes and particular tumor cells. HB-EGF's ability to explicitly bind heparin and heparin sulfate proteoglycans is dissimilar from other EGF-like molecules, and might be related to the enhanced mitogenic activity, relative to EGF, that HB-EGF exerts on smooth muscle cells.

Product Info

Amount: $50 \mu g$

Purification: Greater than 95.0% as determined by:(a) Analysis by RP-HPLC.(b) Analysis by SDS-PAGE. **Content:** The protein was lyophilized from a concentrated (1mg/ml) solution containing 1xPBS pH-7.4.

Lyophilized Mouse HB-EGF Recombinant although stable at room temperature for 3 weeks,

Storage condition : should be stored desiccated below -18°C. Upon reconstitution HB-EGF should be stored at 4°C between 2-7 days and for future use below -18°C. For long term storage it is recommended to

add a carrier protein (0.1% HSA or BSA). Please prevent freeze-thaw cycles.

Amino Acid: DLEGTDLNLF KVAFSSKPQG LATPSKERNG KKKKKGKGLG KKRDPCLRKY KDYCIHGECR YLQEFRTPSC

KCLPGYHGHR CHGLTL.

Application Note

It is recommended to reconstitute the lyophilized Mouse HB-EGF in sterile 18M-cm H2O not less than 100 $\tilde{A} \square \hat{A} \mu g/ml$, which can then be further diluted to other aqueous solutions. The ED50 was determined by a cell proliferation assay using balb/c 3T3 cells is < 1.0 ng/ml, corresponding to a specific activity of > $1.0\tilde{A} \square \hat{A} \square 106$ units/mg.
