## 32-1744: mSCF Recombinant Protein

**Alternative Name** Kit ligand Precursor, C-kit ligand, SCF, Mast cell growth

factor, MGF, SF, KL-1, Kitl, DKFZp686F2250, Hematopoietic growth factor KL, Steel factor.

## **Description**

Source: Escherichia Coli. Stem Cell Factor Mouse Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 165 amino acids and having a molecular mass of 18309 Dalton. The SCF is purified by proprietary chromatographic techniques. Stem cell factor / KIT ligand (SCF) is a cytokine which binds CD117(c-Kit). SCF is also known as 'steel factor' or 'c-kit ligand'. SCF exists in two forms, cell surface bound SCF and soluble (or free) SCF. Soluble SCF is produced by the cleavage of surface bound SCF by metalloproteases.SCF is a growth factor important for the survival, proliferation, and differentiation of hematopoietic stem cells and other hematopoietic progenitor cells. One of its roles is to change the BFU-E (burst-forming unit-erythroid) cells, which are the earliest erythrocyte precursors in the erythrocytic series, into the CFU-E (colony-forming unit-erythroid).

## **Product Info**

Amount: 10 µg

**Purification:** Greater than 98.0% as determined by:(a) Analysis by SEC-HPLC.(b) Analysis by SDS-PAGE. Content: Lyophilized from a concentrated (1mg/ml) solution in water containing 0.02% NaHCO3.

Lyophilized KIT ligand although stable at room temperature for 3 weeks, should be stored

desiccated below -18°C. Upon reconstitution SCF should be stored at 4°C between 2-7 days and Storage condition:

for future use below -18°C. For long term storage it is recommended to add a carrier protein

(0.1% HSA or BSA). Please prevent freeze-thaw cycles.

**Amino Acid:** MKEICGNPVT DNVKDITKLV ANLPNDYMIT LNYVAGMDVL PSHCWLRDMV IQLSLSLTTL LDKFSNISEG

LSNYSIIDKL GKIVDDLVLC MEENAPKNIK ESPKRPETRS FTPEEFFSIF NRSIDAFKDF MVASDTSDCV

LSSTLGPEKD SRVSVTKPFM LPPVA.

## **Application Note**

It is recommended to reconstitute the lyophilized Stem Cell Factor in sterile 18M̸©-cm H2O not less than 100Ã∏µg/ml, which can then be further diluted to other aqueous solutions. The ED50 as determined by the dose-dependant stimulation of Human TF-1 cell line is < 10 ng/ml, corresponding to a Specific Activity of 1x105 IU/mg.
