## 32-1963: mMIP-1g Recombinant Protein

Alternative Name: CCL9/10,MRP2,CCF18.

## **Description**

Source: Escherichia Coli. MIP-1 gamma Mouse Recombinant produced in E.Coli is a single, non-glycosylated, polypeptide chain containing 101 amino acids and having a molecular mass of 11.6 kDa. The MIP-1 gamma is purified by proprietary chromatographic techniques. Mouse MIP-1 gamma is 75% identical in its amino acid compostion as compared to the rat specie. MIP-1 gamma is a CC chemokine localized in murine blood and a widespread range of murine tissues, without having an identified human homolog. MIP-1 gamma signals through the CCR1 receptor. MIP-1 gamma chemoattracts neutrophils and also inhibits colony formation of bone marrow myeloid immature progenitors. MIP-1 gamma has six cysteines including the four highly conserved cysteine residues present in CC chemokines.

## **Product Info**

**Amount:** 20 μg

**Purification:** Greater than 97.0% as determined by:(a) Analysis by RP-HPLC.(b) Analysis by SDS-PAGE.

**Content:** The MIP-1 gamma was lyophilized from 1xPBS solution pH-7.4.

Lyophilized MIP-1 gamma although stable at room temperature for 3 weeks, should be stored

desiccated below -18°C. Upon reconstitution CCL9/10 should be stored at 4°C between 2-7 days

and for future use below -18°C. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Please prevent freeze-thaw cycles.

Amino Acid: QITHATETKE VQSSLKAQQG LEIEMFHMGF QDSSDCCLSY NSRIQCSRFI GYFPTSGGCT RPGIIFISKR

GFQVCANPSD RRVQRCIERL EQNSQPRTYK Q.

## **Application Note**

Storage condition :

It is recommended to reconstitute the lyophilized MIP-1 gamma in sterile 18M-cm H2O not less than  $100\text{\AA}\Box\text{\AA}\mu\text{g/ml}$ , which can then be further diluted to other aqueous solutions. Defined by its ability to chemoattract human neutrophils using a concentration range of 0.1-10 ng/ml, corresponding to a Specific Activity of 10,000-100,000IU/mg.
