Description

FoxA1 (forkhead box A1), also called HNF-3 alpha (hepatocyte nuclear factor 3 alpha) or TCF3A (transcription factor 3A) is a 473 amino acid (aa), 49 kDa (predicted) protein of the forkhead nuclear transcription factor family. Also known as hepatocyte nuclear factors, which are transcriptional activators for liver-specific transcripts such as albumin and transthyretin. The HNF3 family, including HNF3A, HNF3B, and HNF3G, are members of the forkhead class of DNA-binding proteins. It regulates transcription downstream of the estrogen receptor and other steroid hormone receptors.
