

**90-2203: Human IL-32 (Interleukin 32) Pre-Coated ELISA Kit****Application :** ELISA**Description**

This kit was based on sandwich enzyme-linked immune-sorbent assay technology. Anti- Human IL-32 antibody was pre-coated into 96-well plates. Biotin conjugated anti-human IL-32 detection antibody was used. Standards, test samples and biotin conjugated detection antibody were added to the wells subsequently. Wash buffer was used to wash any non-specific binding. HRP conjugated Streptavidin was used as secondary antibody. TMB substrates were used to visualize HRP enzymatic reaction. TMB was catalyzed by HRP to produce a blue color product that changed into yellow after adding acidic stop solution. The density of yellow is proportional to the Human IL-32 amount of samples captured in the plate. Optical Density (O.D) can be read at absorbance 450nm in a microplate reader. Concentration of Human IL-32 can be calculated using the standard curve.
